

PushTAN activation

We hereby would like to inform you that the SMS login in our e-banking will be deactivated soon (probably at the end of January 2021). Please activate our new login method PushTAN to use your e-banking even more conveniently.

A brief explanation of PushTAN

PushTAN is the e-banking login method replacing the SMS login. There will be no need to type in the SMS code anymore, with PushTAN you could confirm the login directly on your smartphone.

How to activate PushTAN

- (1) Search for the App in the AppStore (iPhone) or PlayStore (Android) with the search term «sgkb» and download the SGKB App to your smartphone.

Requirements:

- iPhone: iOS 12 and above
- Android: Version 7 and above

- (2) To display the activation process in English, the device language must be set accordingly.

Start the SGKB App and tap on «Aktivieren». Please note the instructions below ⓘ.

- (3) Decide during the activation process whether you would like to use the SGKB App for all digital services (Mobile Banking, HäschCash, Wiltblick, Finance Assistant etc.) or just confirming the e-banking login and enter your credentials.
- (4) If the device binding was successfully created, you can now login to your e-banking with PushTAN.

In order to receive PushTAN, you must allow the notifications for the SGKB App. You can activate this at any time in the SGKB App under «Einstellungen» (icon on the top right) and «Mitteilungen erlauben».
